DigitalOcean (2.0)

  
Linode

  
Amazon

  
Custom VPS

Credentials

Personal 2 

Name

billowing-stream

Server Size

2GB RAM - 2 CPU Cores - 40GB SSD - \$0.03/Hour - \$20/... 

FORGE IS ALREADY MANAGING 195,149  
APPLICATIONS. HERE'S WHAT IT CAN DO:

On The Cutting Edge

We install Nginx, PHP 7.2, MySQL, Postgres, Redis, and all of the other goodies you need on the cloud of your choice. No more out-dated PHP installations.

### Push To Deploy

Deploying code couldn't be any easier. Just push to master on your GitHub, Bitbucket, or custom Git repository. We'll handle it from there.

### Free SSL Certificates

Forge integrates with LetsEncrypt, allowing you to obtain free SSL certificates for your Forge powered applications.

### Collaborate With Your Team

Using our Plus plan you may instantly share your server's management dashboard with your co-workers.

### Dead Simple Queues

Easily start and manage supervised Laravel Queue workers directly from Forge. No more manual Supervisor configuration.

### Secure By Default

All Forge servers require SSH key authentication and your firewall comes configured out of the box. Security updates are installed automatically.

**L**OVED BY THOUSANDS OF DEVELOPERS:

*Forge helps me focus on writing software instead of writing and maintaining deployment solutions.*

**Beau D. Simensen**

Software Developer at [dflydev](#)

*Never before has launching new servers been this easy.*

**Eric Barnes**

Curator at [Laravel News](#)

*Forge gives me the convenience I love while letting me keep full control of my servers.*

**Chris Fidao**

## DEPLOY YOUR APPLICATION IN MINUTES.

Forge links to your account on one of our supported cloud providers. Or, you can even provision a VPS on the custom provider of your choice.
